

Mailbox Care Instructions and Suggestions:

Thank you for purchasing your new Creative Mailbox & Sign Designs mailbox! Your new mailbox comes with a standard one year warranty against manufacturing or material defects. We wish to help offer you some tips to extend the life of your mailbox so it may continue to give you many years of enjoyment and longevity for your investment.

Imagine what would happen to your automobile finish if you left it on the street in the sun baking and never washed it for years. It isn't hard to envision the results. Your new mailbox is no different. It requires care and attention to maintain and extend its beauty. Caring for your new mailbox is as easy as 1, 2, and 3!

1. Pick up some Rain-X® Spot Free Car Wash at your local auto parts store. This product when used as directed will clean and protect the surface from most water spots and grime. This product is designed to not harm the automotive finish.
2. Though Rain-X® Spot Free Car Wash is designed to repel water and minimize spotting; we also recommend the added protection provided by Meguiars Paint Protect. This is a synthetic product that once applied, provides long lasting protection from the elements and will give your mailbox the like-new appearance that others will envy.
3. After your mailbox is thoroughly cleaned, dry with a Chamois cloth in preparation of the protectant coat. Apply Meguiars Paint Protectant as directed on the bottle. According to the manufacture's information this single application can last up to a year. Sit back, relax, and enjoy your new mailbox!

Other tips:

1. **We do not recommend** calcium and lime removers, as these are caustic in nature and can harm automotive paint finishes and could shorten the life of your mailbox finish. Use of this type of product would void the warranty provided with your mailbox.
2. Keep yard caring equipment like weed whackers and tillers away from the mailbox and hand trim those areas to reduce the risks of damage.
3. Do not allow a sprinkler system to spray on the boxes directly daily. Many sprinkler systems have hard water, chlorine, sulfides and other contaminants which can damage protective coatings like paint and powder coat, greatly reducing the life span of your investment.
4. Do not hang, lean, shake or allow children to play on the mailboxes. This can cause damage to your product if enough force is administered.
5. Always look in your rear view mirror when backing out of the driveway. You just washed and waxed your mailbox, as well as your car, and we don't want to see either of them blemished in any way.
